WEATHERTECH ROOFING PARTNERS

Transaction Support

AGENT RESOURCE / 02

Roofing support built around your real estate transaction.

A roof concern can leave you balancing client questions, repair decisions, and closing dates. WeatherTech gives you a defined process and direct access to William, helping you keep your client informed and coordinate the next steps.

01 Your timeline is part of the plan

Your inspection-response and closing dates guide our scheduling discussions. We confirm availability and explain timing constraints early, giving you realistic options before you make commitments to your client.

02 Clear findings support client decisions

You receive photo-supported findings and an explanation of the recommended next step. When work is needed, a written estimate defines the proposed scope and known limitations, giving you and your client concrete information for repair discussions.

03 Approved work has a coordinated path forward

Once the homeowner authorizes the scope, we coordinate access and scheduling and confirm the next steps. You have one roofing contact to help move the work forward while you manage the broader transaction.

04 You stay informed when conditions change

William is your contact for questions and status updates. If weather, materials, access, or newly discovered conditions affect the plan, we communicate the issue and discuss available options, so you can keep your client and transaction team informed.

05 Documentation supports the closing process

After work is completed, we provide an invoice, scope summary, available completion photos, and applicable warranty information, helping you explain the completed work and respond to documentation requests.

A ROOFING PARTNER YOU CAN REACH

Clear answers, coordinated next steps, and direct communication. We consider your closing deadline throughout; completion timing depends on the approved scope and site conditions.
